Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being prihted, and is derived by analysis of the total score distribution.

Cipecies Aspergillus oryzae

Cipecies Sapergillus Oryzae

Ritukawa, M.; Nagaba, H.; Kirita, N.; Tsuboi, A.; Udaka, S.

Gene 84, 319-327, 1989

A; Title: Isolation of a cDNA encoding Aspergillus oryzae Taka-amylase A: evidence for mul

A; Reference number: JN0S88; MUID:90128276; PMID:2612911

A; Residues Taka-a

A; Molecule type: mRNA

A; Residues: 1-499 <-TSU

C; Comment: The alpha amylases are encoded by multigene family.

C; Comment: The alpha amylases are encoded by multigene family.

C; Comment: The alpha amylases are encoded by multigene family.

C; Comment: The alpha amylases are encoded by multigene family.

C; Comment: The alpha amylases are encoded by multigene family.

C; Comment: The alpha amylases are encoded by multigene family.

C; Comment: Taya-di

A; Introns: 56/1; 69/3; 108/2; 144/3; 221/1; 275/2; 324/2; 404/3

C; Function:

A; Description: catalyzes the hydrolysis of internal 1,4-alpha-D-glucosidic bonds

A; Pethway: glycopen(starch degradation

C; Superfamily: Aspergillus alpha-amylase; polysaccharide degradation

C; Superfamily: Aspergillus alpha-amylase; polysaccharide degradation

C; Superfamily: Aspergillus alpha-amylase; predicted <-SIG>
F; 12-10, Domain: alpha-amylase core homology <-Max>

F; 12-49, Product: alpha-amylase core homology <-Max>

A;Title: Cloning and nucleotide sequence of the genomic Taka-amylase A gene of Aspergill A;Reference number: JT0466
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     C; Function:
A,Description: catalyzes the hydrolysis of internal 1,4-alpha-D-glucosidic bonds
A,Description: catalyzes the hydrolysis of internal 1,4-alpha-D-glucosidic bonds
A,Description: alpha-amalase alpha-amylase; core homology
C; Keywords: glycoprotein; glycosidase; hydrolase; polysaccharide degradation
F;1-21/Domain: signal sequence #status predicted <SIG>
F;22-499/Product: alpha-amylase #status predicted <ALP>
F;194-321/Domain: alpha-amylase force homology <AMY>

                                                                                                                 Nighternate names: LKA1 protein; raw starch degrading amylase.
Nicontains: alpha-dextrin endo-1,6-alpha-glucosidase (EC 3.2.1.41)
Species: Lipowyces knonnenkoae
C;Species: Lipowyces knonnenkoae
C;Accession: JC4510; PC4116
E;Steyn, A.J.C.; Marmur, J.; Pretorius, I.S.
A;Title: Cloning, sequence analysis and expression in yeasts of a cDNA containing a Lipowy. Reference number: JC4510; MUID:96105202; PMID:8529895
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            H71415

Usage by and for commercial entities requires a license agreement (See http://www.isb-sib.ch/announce/or send an email to license@isb-sib.ch).
at high concentrations.

-1- SUBGUNT: Monomer.

-1- SUBGUNT: Monomer.

-1- SUBGUNT: Monomer.

-1- SUBGUNT: Monomer.

-1- BIOTECHNOLOGY: Used in the brewing industry to increase the fermentability of beer worts (including those made from unmalted cereals), in the starch industry to make high maltose and high DE syrups (starch saccharification), in the alcohol industry for reduce fermentation time, in the cereal food industry for flour supplementation and improvement of chilled and frozen dough, and in the forestry industry for low-temperature modification of starch. Sold under the name Fungamyl by Novozymes.

-1- MISCELLANEOUS: The sequence of AMY1 and AMY2 is shown.

-1- SIMILARITY: Belongs to the glycosyl hydrolase 13 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    EMBL; X12725; CAA31219.1; -.

                                         Curr. Genet. 17:203-212(1990).
-!- CATALYTIC ACTIVITY: Endohydrolysis of 1,4-alpha-glucosidic
-!- CATALYTIC ACTIVITY: Endohydrolysis of 1,4-alpha-glucosidic
linkages in Oligosaccharides and polysaccharides.
-!- COFACTOR: Binds 2 calcium ions per subunit. Calcium is inhibitory
at high concentrations (By similarity).
-!- SIMILARITY: Belongs to the glycosyl hydrolase 13 family.

"Characterization of a novel alpha-amylase from Lipomyces kononenkoae and expression of its gene (LKA1) in Saccharomyces cerevisiae.";
Curr. Genet. 28:526-531(1995).
-!- CATALYIC ACTIVITY: Endohydrolysis of 1,4-alpha-glucosidic
!! Linkages in Oligosaccharides and polysaccharides.
-!- COFACTOR: Binds 2 calcium ions per subunit. Calcium is inhibitory at high concentrations (By similarity).
-!- SUBCELLULAR LOCATION: Secreted.
-!- SUBCELLULAR LOCATION: Secreted.
-!- SIMILARITY: Belongs to the glycosyl hydrolase 13 family.
-!- SIMILARITY: Contains 1 carbohydrate binding type-21 (CBM21)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                EMBL; U30376; AAC49622.1; ALT_INIT.

The sequence os that of the Asoergillus oryzae alpha amylase, sold commercially as FUNGAMYL (TM) by Novo Nordisk A/S. The sequence can be mutated by substitution of one or more of its methionine residues for any amino acid other than cysteine. The mutant alpha-amylase exhibits a better activity level and better stability in the presence of oxidising agents than previous mutant alpha amylases, and improved thermostability at moderately low pH. The enzyme can be used as an additive for detergence, dishwashing agents and liquifaction agents. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Mutant alpha-amylase from Bacillus species comprising a methionine substitution - with improved stability and activity at low pH, for detergents, dishwashing agents and liquefaction agents.
                                                                                                                                                                                                                                                                                                                              Methionine substitution; stability; activity; detergent; dishwashing agents; liquifaction agents.

Oxidation stable alpha amylases can be used for the simultaneous desizing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     and bleaching or scouring of a fabric comprising starch or starch derivatives. They exhibit a better heat stability, especially in the presence of oxidising agents. They are obtained from a parent alpha amylase by replacing one or more methiconine residues with any amino acid different from Cys or Mer, preferably Leu, Thr, Ala, Gly, Ser, Ile or Asp. The parent alpha amylase is pref. derived from a Bacillus species, although alpha amylases of fungal origin can also be used. This sequence is the wild type (unmodified) alpha amylase of Aspergillus oryzae
                                                                                                                           Alpha amylase; oxidation; desizing; bleaching; scouring; fabric; starch; thermostable; methionine; Bacillus licheniformis; Bacillus amyloliquefaciens; Bacillus stearothermophilus; Aspergillus oryzae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          - for simultaneous desizing and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Variant alpha amylase enzymes which have improved washing and/or as detergent additives. The enzymes have one or more amino acid residues added, deleted or substituted. The variants can also be used for textile desizing prior to scouring, blacching and dyeing. The variants have improved thermostability, acid/alkaline stability; low temperature optimum; higher hydrolysis velocity and improved tolerance to other composition constituents, e.g. oxidation agents. (Updated on 25-MAR-2003 to correct PI field.)

a variant) corresponding to 325-345 of AAW1448 is
deleted or replaced with a fragment corresponding to this
fragment; claim 38"
residue of a parent alpha-amylase (used as a template for a variant) corresponding to 196-198 of AAW14499 is deleted or replaced with a fragment corresponding to this
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is the mature Aspergillus oryzae alpha-amylase (A). Variants of parent termamyl—and fungamyl—like alpha-amylases (and methods of constructing them) are claimed. Examples of variants are featured above. The variants have altered properties such as calcium dependency, substrate binding and stability. Also one or more proline or cystein residues in the variant is modified or replaced with a non-proline or non-cystein residue such as alanine. The variants can be used for (dish)washing, as detergent additives or for fabric desizing or starch liquefaction. They can also be used for the production of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Alpha-amylase variants and methods of production - have altered
properties such as calcium dependency, substrate binding and stability.
                                                                                                                                                                                                                                                                                                                  fragment corresponding to this fragment; claim 36'
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ;

substance

```
The present sequence represents a fungamyl-like alpha-amylase. The specification describes variants of this fungamyl-like alpha-amylase, conspecification describes variants of this fungamyl-like alpha-amylase, which have an alteration in one the amino acid regions 98-110, 150-160, 150-160, 151-167, 280-288, 448-455, and 468-475. Bach alteration is a deletion or substitution of an amino acid downstream of a particular position. The variants retain alpha-amylase activity, and have better heat stability and/or stability at acidic pH, relative to wild-type enzyme. The variants can therefore be used at higher conversion or faster reaction, and have reduced need for cooling and reduced risk of contamination). The variants may also be used in conjunction with other enzymes, particularly of may also be used uning dextrinisation. The variants are used to produce syrups, particularly of high maltose content, or alcohol, from starch; as dough improver for baked goods; in the variant, to increase fermentability of the wort; and for liquefaction of starch
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New variant of Fungamyl-like alpha-amylase, useful for production of maltose syrups, includes mutations that improve stability against heat and acidic pH.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

                                                                                                                                                                                                                                    The present invention relates to a method of producing heterologous halological substance. The method involves culturing mutant of wild-type happergillus niger strain in medium suitable for producing heterologous biological substance, where mutant strain comprises first nucleotide sequence encoding heterologous biological substance and second nucleotide heterologous biological substance and second nucleotide heterologous biological substance. The present sequence is the Aspergillus niger neutral alpha-amylase A (amyA) protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Producing heterologous biological substance comprises culturing mutant of wild-type Aspergillus niger strain in medium suitable for producing heterologous biological substance and recovering heterologous biological
                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                               ö

```
The present invention describes polynucleotides which encode processing enzymes (e.g. alpha-amylase, pullulanase, alpha-glucosidase, glucose isomerase, or glucoamylase) that are optimised for expression in plants. The polynucleotides encode mesophilic, thermophilic or hyperthermophilic processing enzymes, which are activated under suitable conditions to act upon the desired substrate. Also described are self-processing transgenic upon the desired substrate, and escribed are self-processing transgenic processing. Also described is a method (M) for converting starch to starch-derived products in a transformed plant part, (TPP), by activating the starch processing enzyme contained in it. Transgenic grain is useful for preparing maltodextrin. A transformed plant (TP) can be used to produce food products having improved taste and to produce fermentable
          The present invention relates to a method of producing heterologous biological substance. The method involves culturing mutant of wild-type Aspergillus niger strain in medium suitable for producing heterologous biological substance, where mutant strain comprises first nucleotide sequence encoding heterologous biological substance and second nucleotide heterologous biological substance. The present sequence is the Aspergillus niger neutral alpha-amylase B (amyB) protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel polynucleotide encoding hyperthermophilic processing enzymes e.g. alpha-amylase, useful for producing plant to produce food products having improved taste or fermentable substrates for ethanol.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Self-processing plant; plant; processing enzyme; alpha-amylase; grain; pullulanase; alpha-glucosidase; glucose isomerase; glucoamylase; mesophilic; thermophilic; hyperthermophilic; transgenic plant; starch; maltodextrin; ethanol; fermentation; beverage; enzyme.

The sequences given in ABB80164-87 show enzymatic proteins derived from A. funigatus. These proteins display the catalytic activity of an enzyme such as tannase, callulase, glucose oxidase, glucoamylase, phytase, betaglactosidases, invertase, lipase, alpha-amylase, laccase, polygalacturonase or xylanase. Compositions comprising the tannase are useful for modulating the amount of compositions comprising the tannase are useful for modulating the amount of cellulose in a composition. Compositions comprising the amount of cellulose in a composition comprising the amount of glucose or oxygen in a composition. Compositions comprising phytase are useful for modulating the amount of myo-inosicol phosphates in a composition. Composition comprising comprising the amount of myo-inosicol phosphates in a composition of lactose in a composition com

modulating the amount of glyceride in a composition. Compositions comprising alpha-amylases are useful for modulating the amount of starches or maltodextrins in a composition. Compositions comprising laccase are useful for modulating the amount of oxidated phenolic compounds in a composition. Composition comprising polygalacturonases are useful for modulating the amount of Nylan or xylo-oligomers polygalacturonic acid chains in a composition. Composition comprising cylogalacturonic acid chains in a composition. Composition and corresponding DNA's are useful in various industries such as those involved in the masking of food and feed, beverages, textiles and detergants. The DNA's are useful to express recombinant enzymes for characterization, modification or compares vith the nucleotide sequence of A.fumigatus to identify duplicated genes of paralogs having the same or similar blochemical activity and/or function, to compare with nucleic acid sequence of other related or distant fungal organisms to identify potential orthologous enzyme genes, for selecting and making oligomers for attachment to a nucleic acid array for examination of expression patterns, and to raise anti-protein antibodies. The polypeptide having cannows the colour, flavour and health benefite of tea products, improves the colour, lavour and health benefite of tea products, cativity enhances cleaning ability of detergent compositions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Thermus sp. IM6501, maltogenic amylase; EC 3.2.1.133; crystallisation; protein co-ordinate data; 3 dimensional structure.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is an alpha-amylase enzyme of the filamentous fungus shopergillus niger. Alpha-amylases catalyse the endohydrolysis of 1,4-alpha-glucosidic linkages in oligosaccharides and polysaccharides. The alpha-amylase polynucleotides and polypeptides of the invention are

A thermostable alpha-amylase (AAR88212) of Thermomyces lanuginosus CBS 224.63 is expressed in Aspergillus niger hosts using a gene (AAT10562) stockated from a T. lanuginosus gene library. The recombinant enzyme (54-60 kDa) shows optimal activity at 60-70 deg and pH 5.8-6, has a pI of 3.7 and is active at 60-80 deg. (Updated on 16-OCT-2003 to standardise OS
                                                                                                                                                                                                                                                                                                                                                                                                                   Thermophilic alpha-amylase with activity range of 60-80 degrees C -derived from Thermomyces lanuginosus, useful in the prepn. of foodstuffs and bakery prods. esp. bread.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Recombinant DNA construct; transformed plant; improved plant property; cold tolerance; heat tolerance; drought tolerance; heat behindels; pathogen tolerance; pest tolerance; plant disease resistance; cell cycle pathway modification; plant growth regulator; homologous recombination; seed oil yield; protein yield; carbohydrate; nitrogen; phosphorus; photosynthesis; lignin; galactomannan; bacterial polypeptide.

amylase (AAR88212) are the products of DNA fragments (AAT10565-66)
generated from T. lanuginosus genomic DNA by PCR using primers based on
conserved regions of alpha-amylase genes. (Updated on 16-OCT-2003 to
standardise OS field)

The invention relates to a recombinant DNA construct comprising a promoter functional in a plant cell, where the promoter is positioned to provide for expression of a polynuclectide encoding a polypeptide from a microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a cransformed plant having an improved property. The plant is a crop plant such as major construct and growing the transformed plant where the catecombinant DNA construct and growing the transformed plant where the polynuclectide or polypeptide is useful for improving plant with the compinant DNA construct is useful for improving plant properties. The recombinant DNA construct is useful for improving plants with construct is useful for of increased plant, where the polynuclectide or polypeptide is useful for of ingroved plant properties. Configuration of acconditions, pathogens or pease, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth rate by modification of content, improved yield by modification of carbohydrate, nitrogen or phosphorus use and/or uptake, by modification of photosynthesis or by providing improved lighin production or improved allows when the properties or providing improved lighin production or improved allows when the properties or producing the producing contains and produced produced to the producing or provided the producing or producing the producing or producing the producing plant growth and development under at least one stress condition, majored produced produce
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New recombinant DNA construct comprising a promoter positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source, useful for producing plants with improved properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           scope of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Recombinant DNA construct; transformed plant; improved plant property; cold tolerance; heat tolerance; drought tolerance; herbicide; osmosis; pathogen tolerance; pest tolerance; plant disease resistance; cell cycle pathway modification; plant growth regulator; homologous recombination; seed oil yield; protein yield; carbohydrate;

The invention relates to a recombinant DNA construct comprising a promoter functional in a plant cell, where the promoter is positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a cransformed plant having an improved property. The plant is a crop plant such as maize or soybean. The method of producing a transformed plant comprised by a migroved property comprises transforming a plant with the recombinant DNA construct and growing the transformed plant, where the copymolectide or polypeptide is useful for improving plant properties. The recombinant DNA construct is useful for improving plant properties. The recombinant DNA construct is useful for improving plant with the improved plant properties, e.g. improved cold, heat or drought tolerance, colerance to herbicides, extreme commolic conditions, pathogens or peets, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased resistance to plant disease, better growth rate by modification of content, improved yield by modification of carbohydrate, nitrogen or content, improved yield by modification of carbohydrate, nitrogen or providing improved plant growth and development under at least one stress condition, improved plant growth and development under at least one stress production. This sequence represents a bacterial polypeptide used in the scope of the invention. Note: The sequence data for this patent did not form from the form ispan or the form at the printed specification but was obtained in electronic form and the mispan of the day of the d
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New recombinant DNA construct comprising a promoter positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source, useful for producing plants with improved properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

Variant-Type Carbohydrate Hydrolase,
Variant Gene Of The Enzyme And Method For Producing
Oligosaccharide Using The Enzyme
is Sequence 2, Application US/08339715A
; Sequence 2, Application US/08339715A
; Sequence 2, Application US/08339715A
; Patent No. 5965442
; GENERAL INFORMATION:
APPLICANT: Kanaka, Hiroki
APPLICANT: Shimada, Jiro
APPLICANT: Takata, Hiroki
APPLICANT: Takata, Hiroki
APPLICANT: Takata, Hiroki
APPLICANT: Oranse, Michiyo
APPLICANT: Oranga, Shigetaka
TITLE OF INVENTION: NEOPULLULANASE
NUMBER OF SEQUENCES:

Patent No. 5631149

GENERAL INFORMATION:
APPLICANT: MATSUI, IKUO
APPLICANT: MININI, SACHIO
APPLICANT: HONDA, KOICHI
TITLE OF INVENTION: VARIANT-TYPE CARBOHYDRATE HYDROLASE,
TITLE OF INVENTION: VARIANT GENE OF THE ENZYME AND METHOD FOR PRODUCING
TITLE OF INVENTION: OLIGOSACCHARIDE USING THE ENZYME
NUMBER OF SEQUENCES: 17
CORRESPONDENCE ADDRESS:
ADDRESSEE: BIRCH, STEWART, KOLASCH & BIRCH
STREET: 8110 Gatehouse Road, Suite 500 East
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DB 1; Length 468;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                            Sequence 4, Application US/08204656B
Patent No. 553882
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Matsui, Ikuo
APPLICANT: Mishit, Sachio
TITLE OF INVENTION: Variant Gene Of The Enzyme And Method For Producing
TITLE OF INVENTION: Oligosaccharide Using The Enzyme
CORRESPONDENCE ADDRESS:
ADDRESSE: Birch, Stewart, Kolasch & Birch, LLP
STREET: 8110 Gatehouse Road, Suite 500 East
                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

alpha-amylase (EC 3.2.1.1) B precursor - Aspergillus awamori
C;Species: Aspergillus awamori
C;Accession: B48305
R;Korman, D.R.; Bayliss, F.T.; Barnett, C.C.; Carmona, C.L.; Kodama, K.H.; Royer, T.J.; 7
Curr. Genet. 17, 203-212, 1990
A;Reference number: A48305; MUID:90254827; PMID:2340591
A;Reference number: B48305
A;Status: preliminary; not compared with conceptual translation
A;Molecule type: DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            A;Residues: 1-513 .<SKE>

       this this concentrations.

Subuntr. Monomer.

Subuntr. Monomer.

BIOTECHNOLOGY: Used in the brewing industry to increase the fermentability of beer worts (including those made from unmalted cereals), in the starch industry to make high maltose and high DE syrups (starch saccharification), in the alcohol industry to reduce fermentation time, in the cereal food industry for low temperature modification and improvement of chilled and frozen dough, and in the forestry industry for low-temperature modification of starch. Sold under the name Fungamyl by Novozymes.

MISCELLANDROUS: The sequence of AMY1 and AMY2 is shown.

SIMILARITY: Belongs to the glycosyl hydrolase 13 family.
COFACTOR: Binds 2 calcium ions per subunit. Calcium is inhibitory
